

Shoprite-X Polling App - Facilitator Guide

Shoprite-X Polling App — Facilitator User Guide

Overview

As a facilitator, you manage polls, control live sessions, and view results. This guide covers everything you need to run engaging workshops, retrospectives, and PI events.

Getting Started

Accessing the Admin Dashboard

1. Navigate to your app URL followed by /admin (e.g., <https://your-app.vercel.app/admin>)
2. Enter the **admin token** provided by your system administrator
3. Click **Sign In**

Your token is stored in your browser — you won't need to re-enter it unless you clear your browser data.

Managing Polls

Creating a New Poll

1. From the admin dashboard, click **Create New Poll**
2. Fill in:
 - **Title** (required, max 200 characters) — displayed to participants
 - **Description** (optional, max 1000 characters) — context for participants
 - **Background Image** (optional) — JPEG, PNG, or WebP, max 5 MB
3. Click **Create Poll**

Editing a Poll

1. Find the poll in the dashboard list
2. Click **Edit**
3. Update the title, description, or background image
4. Click **Save Changes**

Cloning a Poll

Use this to reuse a poll structure without affecting the original:

1. Click **Clone** next to the poll
2. A new poll is created with “(Copy)” appended to the title
3. All questions are duplicated; responses are not copied

Resetting Responses

To clear all participant responses (e.g., for a fresh session):

1. Click **Reset** next to the poll
2. Confirm the action
3. All responses are permanently removed

Deleting a Poll

1. Click **Delete** next to the poll
 2. Confirm the action
 3. The poll is soft-deleted (hidden from views but retained for 30 days)
-

Managing Questions

Adding Questions

1. Navigate to the poll's **Edit** page (click “Edit” from the admin dashboard)
2. Scroll down to the **Questions** section
3. Click **+ Add Question**
4. Fill in:
 - **Question Text** (required, max 500 characters) — the prompt shown to participants
 - **Options** (2–10 predefined choices) — click “+ Add Option” to add more, “X” to remove
 - **Allow custom free-text answer** (checkbox) — adds a “Custom” option where participants can type their own response
5. Click **Add Question**

Editing Questions

1. Find the question in the list on the Edit page
2. Click **Edit** next to the question
3. Modify the text, options, or custom setting
4. Click **Update Question**

Deleting Questions

1. Click **Delete** next to the question
2. Confirm the deletion

Question Limits

- Minimum 1, maximum 20 questions per poll
 - Minimum 2, maximum 10 options per question
 - Question text: max 500 characters
-

Visual Canvas Editor

The canvas editor appears at the bottom of the Edit page once you have at least one question. It lets you visually position questions on a background image.

Placing Questions on the Canvas

On desktop (1024px+):

1. Scroll down to the **Visual Canvas Editor** section on the Edit page
2. **Unplaced questions** appear in the sidebar on the left
3. **Drag** a question from the sidebar onto the canvas area
4. The question card appears where you dropped it
5. Positions are saved automatically

Repositioning and Resizing

- **Drag** a placed question to move it
- **Resize** using the corner handles on the question card
- Positions are stored as percentages (0–100%), so they scale across screen sizes

Removing from Canvas

- **Right-click** a placed question and select “Remove from canvas”
- The question returns to the sidebar (it’s not deleted, just unplaced)
- Unplaced questions still appear in the participant’s list view

Canvas Background

- Upload a background image via the poll metadata form (JPEG, PNG, or WebP, max 5 MB)
- If no image is set, a neutral grey canvas is displayed
- If the image fails to load, a placeholder with an error message is shown

Responsive Behaviour

Viewport	Behaviour
Desktop (≥1024px)	Full canvas editor with drag-and-drop
Tablet (768–1023px)	View-only canvas mode
Mobile (<768px)	Vertical scrollable list (no canvas)

Note: If the browser doesn’t support the Drag and Drop API, a warning banner is shown and coordinate input fields are provided as a fallback.

Running a Live Session

Opening the Facilitator Dashboard

1. Click **Facilitate** next to the poll
2. The facilitator dashboard opens with live controls

Session Controls

Control	Default	Description
Voting	Closed	Opens/closes participant submissions
Live Results	Off	Auto-refreshes results every 3 seconds
Anonymisation	On	Replaces names with “Participant 1, 2, ...”

Reveal Stages

Control how much detail participants and viewers see:

Stage	What's Shown
HIDDEN	No results visible
COUNTS	Aggregated totals per option
DETAILS	Full results including free-text responses and names (if anonymisation is off)

Live Statistics

The dashboard shows in real time: - **Participant count** — unique participants who submitted - **Submission count** — total individual question responses

Typical Session Flow

1. **Before the session:** Create poll, add questions, position on canvas
2. **Start session:** Open the facilitator dashboard
3. **Share the poll URL** with participants (e.g., via chat or screen share)
4. **Open voting** — participants can now submit
5. **Monitor** submissions via the live statistics
6. **Close voting** when ready (participants are notified within 5 seconds)
7. **Reveal results** progressively: **HIDDEN** → **COUNTS** → **DETAILS**
8. **Toggle anonymisation** off if you want to show who said what

Test Mode

Preview the participant experience without polluting real data:

1. Click **Preview as Participant** in the facilitator dashboard
2. A new tab opens with `?testMode=true`
3. Submit test responses — they're tagged as test data
4. View test responses in the **Test Responses** tab
5. Click **Clear Test Responses** to remove them (real data is unaffected)

Viewing Results

Results Tab

The Results tab shows aggregated data per question: - Option counts and percentages (bar chart) - Free-text responses grouped under “Custom” - “No responses yet” for questions with zero submissions

Privacy Controls

- When **anonymisation is on**: No real names appear anywhere
 - When **anonymisation is off** + **DETAILS** reveal: Names shown alongside responses
 - Free-text section is hidden when no custom entries exist
-

Tips

- Always test your poll before a live session using Test Mode
 - Keep voting open long enough for all participants to submit
 - Use the **HIDDEN** → **COUNTS** → **DETAILS** progression to build suspense
 - Enable anonymisation for sensitive topics to encourage honest feedback
 - The “Another facilitator session may be active” warning appears if multiple people open the facilitator view — changes use last-write-wins
-

Troubleshooting

Issue	Solution
“Invalid or missing admin token”	Re-enter your admin token on the login page
Results not updating	Enable “Live Results” toggle
Participants can’t submit	Check that voting is open
Poll not showing for participants	Ensure the poll isn’t deleted
Connection lost	Check your internet; the app retries automatically
