

Shoprite-X Polling App - Participant Guide

Shoprite-X Polling App — Participant User Guide

Overview

As a participant, you respond to polls during live sessions such as workshops, retrospectives, and PI events. This guide explains how to access a poll, submit your responses, and what to expect during a session.

Accessing a Poll

1. Your facilitator will share a **poll URL** (via chat, email, or screen share)
 2. Open the link in your browser
 3. The poll title and description are displayed
-

Entering Your Name

1. Type your **display name** (2–50 characters) in the name field
2. Click **Continue**
3. Your name is stored in your browser — if you refresh the page, it will be restored automatically

Note: Your name is used to identify your responses. If anonymisation is enabled by the facilitator, your real name will not be shown in results.

Answering Questions

Once you enter your name, the poll questions appear. Depending on the device:

- **Desktop:** Questions may be arranged visually on a canvas background
- **Mobile:** Questions appear as a vertical scrollable list

For each question:

1. **Select one option** from the predefined choices
2. If a **“Custom”** option is available, you can select it and type your own answer
3. All questions must be answered before submitting

Validation Rules

- Every question must have a selection
 - If you select “Custom”, the text field cannot be empty
 - Your name must be at least 2 characters
-

Submitting Your Responses

1. After answering all questions, click **Submit**
2. A **confirmation screen** appears: “Already submitted”
3. Your responses are saved — you cannot edit them after submission

Important: You can only submit once per poll from the same browser. If you try again, you’ll see the “Already submitted” message.

What Happens During a Live Session

Voting Opens and Closes

- The facilitator controls when voting is open
- If voting is **closed**, you’ll see: “Voting is currently closed”
- If voting **closes while you’re filling in the form**:
 - The submit button is disabled
 - A banner appears: “Voting has been closed by the facilitator”
 - Your partial answers are **not saved**
 - You can still copy your free-text answers before navigating away

Results

- The facilitator decides when and how results are revealed
 - You may see results on a shared screen during the session
 - If anonymisation is enabled, your name won’t appear in results
-

Tips

- Have your poll URL ready before the session starts
 - Answer promptly once voting opens — the facilitator may close it at any time
 - Use the “Custom” option to share unique perspectives not covered by predefined choices
 - If you lose connection, the app will retry automatically and show a “Connection lost” banner
-

Troubleshooting

Issue	Solution
“Voting is currently closed”	Wait for the facilitator to open voting
“Already submitted”	You’ve already responded — each person can only submit once
Page won’t load	Check your internet connection and try refreshing
Submit button disabled	Ensure all questions are answered; check if voting was closed
Name field shows previous name	This is normal — your name is remembered from your last session

Privacy

- Your responses are stored securely in the database
 - The facilitator can enable anonymisation to hide your name from results
 - Response data is automatically purged after 90 days
 - Your session token (stored in your browser) prevents duplicate submissions
-
